

CLAIMS

In the Claims

The following is a marked-up version of the claims with the language that is underlined (“___”) being added and the language that contains strikethrough (“—”) being deleted:

1. (Previously Presented) A method for handling digital messages, the method comprising:

determining whether a sender of a received email message is currently present at an Instant Messaging (IM) account; and

in response to determining that the sender of the received email message is currently present at an IM account, automatically launching an IM session with the sender.

2. (Previously Presented) The method of claim 1, wherein determining whether a sender of a received email message is currently present at an IM account includes extracting contact information from the email message, the contact information being associated with the sender of the received email message.

3. – 9. (Canceled)

10. (Currently Amended) A computer-readable storage medium ~~comprising:~~ that includes a program that when executed by a computer performs at least the following:

~~computer-readable code adapted to instruct a programmable device to determine~~ determining whether a sender of a received email message is currently present at an Instant Messaging (IM) account; and

~~computer-readable code adapted to instruct a programmable device to,~~ in response to determining that the sender of the received email message is currently present at an IM

account, automatically ~~launch~~ launching an IM session with the sender.

11. (Currently Amended) The computer-readable storage medium of claim 10, ~~further comprising computer-readable code adapted to instruct a programmable device to extract~~ the program further extracting contact information from the email message, the contact information being associated with the sender of the received email message.

12. – 17. (Canceled)

18. (Previously Presented) A system for handling digital messages, the system comprising:

means for determining whether a sender of a received email message is currently present at an Instant Messaging (IM) account; and

means for, in response to determining that the sender of the received email message is currently present at an IM account, automatically launching an IM session with the sender.

19. (Currently Amended) A system for handling digital messages, the system comprising:

a memory that stores at least the following:

condition-determination logic ~~adapted to determine~~ that determines whether a sender of a received email message is currently present at an Instant Messaging (IM) account; and

launch logic ~~configured to, that,~~ in response to determining that the sender of the email message is currently present at an IM account, automatically ~~launch~~ launches an IM session with the sender.

20. (Currently Amended) The system of claim 19, further comprising information-

extraction logic ~~adapted to extract~~ that extracts contact information from the email message, the contact information being associated with a sender of the email message.

21. – 24. (Canceled)

25. (Currently Amended) A system for handling digital messages, the system comprising:

a memory that stores at least the following:

condition-determination logic ~~adapted to determine~~ that determines whether a sender of a received digital message is currently present at an Instant Messaging (IM) account;

launch logic ~~configured to, that,~~ in response to determining that the sender of the received digital message is currently present at an IM account, automatically ~~launch~~ launches an IM session with the sender.

26. (New) A computer-readable medium for handling digital messages, the computer-readable medium including a program that when executed by a computer performs at least the following:

determining whether a sender of a received email message is currently present at an Instant Messaging (IM) account; and

in response to determining that the sender of the email message is currently present at an IM account, automatically, without user input, launching an IM session with the sender.

27. (New) The computer-readable medium of claim 19, the program further extracting contact information from the email message, the contact information being associated with a sender of the email message.
